

**SPM Basic Integration** **Sentry Power Manager™ & Intelligent CDU's**

**1.0 Executive Summary**

The SPM Basic Integration solution ensures that the SPM System is quickly up and running, tested and your people are trained to immediately benefit from this powerful tool. If you have software professionals well versed in the power management area, this service provides a very basic installation and allows you to come back and customize the various features at your own pace.

**2.0 Features and Benefits**

Features	Benefits
SPM Installation/Setup	Ensures that SPM is installed with entry level setup to ensure secure operation, and allows the customer to customize in their own time.
Location and cabinet creation	Data center floor and location information helps ease of use and associates cabinets with particular CDU's.
Testing	Provides verification that all operations are working correctly.
Training	Only through proper training can you be assured that you are getting the maximum value from SPM and your Cabinet Power Distribution Units (CDU's). Once your basic installation is complete, a basic overview of the different features are reviewed so further customization can be completed per your time table.

**3.0 Details of Service**

The specific activities of this service are listed below. For each item, STI will perform the work described.

Service	
Activities	Description
CDU Setup Confirmation	CDU setup and basic integration to the network is mandatory and our network engineers ensure completeness through initial site review. If CDU's are not already IP enabled additional service costs may be incurred

SPM Installation/Setup	Unpack and mount the network appliance which needs a 1U space within the data center. The system configuration, LDAP setup and security definitely are critical for the success of the integration.
Location and cabinet creation	Create locations and upload custom jpegs, create cabinets including cabinet name, area, actual capacity, theoretical capacity and associate with a location
Testing	Verification of setup
Training	Includes Cabinet Power Distribution Unit (CDU) and SPM features

## 4.0 Scope of Responsibility

### STI Responsibility

- Provide timely follow-up to sale including
  - Pre-site communication
  - Confirmation of scheduling
- Follow customer site requirements
- Ensure customer communication is maintained through integration process
- Document and review work performed

### Customer Responsibility

- Provide network access during integration
- Ensure IP addresses are set to ensure seamless SPM integration
- Ensure network personnel are there to assist in customization effort during integration of user access, group naming, etc.
- Review installation and sign Field Service Report if work is accepted
